

HISTORY AND PHYSICAL EXAMINATION

observation

- **Normal** blood pressure (120/80 mm Hg)
- **Normal** weight (64 kg)
- All tests within expected range except for:
 - Systolic blood pressure reading was suspiciously high (175 mm Hg)
 - Redundant CBC results were not normal results
- Possible cause of discrepancy: suspecting a recent blood infection results
- The lab values are consistent with normal functioning, but the high blood pressure and inconsistent CBC results warrant further investigation. conclusion
- Regular check-ups and monitoring for any potential health issues should be prioritized.
